

Enel X

Promoting electric mobility for sustainable development in Latin America

Enel Group today

We are a leader in the new energy world

73 mn end users

43 GW capacity²

~ 71 mn customers⁴

- 1. By number of customers. Publicly owned operators not included
- 2. By installed capacity. Includes managed capacity for 4.2 GW
- 3. It includes nuclear
- 4. Includes customers of free and regulated power and gas markets

Enel X accelerates energy transition by opening energy to new uses

New customer-oriented businesses, where digital transformation is the backbone

Latin America leading electric public transportation

- Latin America is starring in the development of electric buses ahead of the United States and Europe, positioning itself only after China.

The e-bus market take off in Latin America and the Caribbean

(number of accumulated buses)

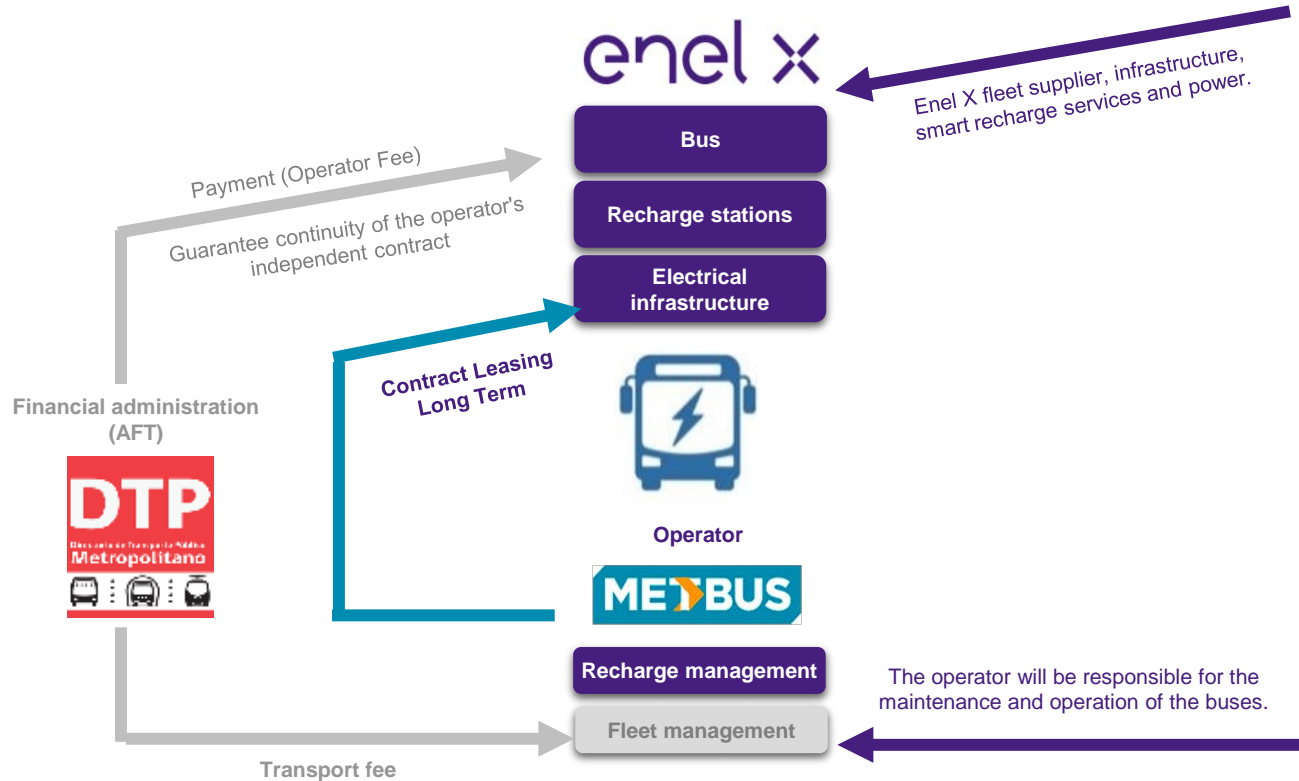

- Latin America and the Caribbean has 550 electric buses that now run in 8 countries (Colombia, Peru, Brazil, Chile, Argentina, Uruguay, Ecuador and Costa Rica)
- It is estimated that a total number of electric buses will reach 7.000 in 2023 in the entire region
- Enel X has carried almost 50% of the buses that are currently in operation (Colombia, Peru and Chile)
- Enel X will continue to increase its commitment to boost the development of sustainable transport in the region

Latin America as an example of an innovative business model

- Electric public transport in Latin America is economically and technologically competitive
- Long-term, authorities-backed financing, allows financial institutions to have greater guarantees to invest

relevant projects for public
transport worldwide

Boosting electric public transport in Latin America

Chile: Electric buses project

Latin America's largest commercial electric bus fleet

- 287 buses 100% electric
- Public/Private Alliance
- Smart bus stops equipped with video analytics, advertising, WiFi, real-time information
- 8 electro-terminals with Photovoltaic Panels

Colombia: Electric buses in Bogotá

- **First electric bus in Bogota:** 18 meters long. Autonomy of 219 km
- **Transmilenio project:** 379 electric buses will be incorporated into the city of Bogota, with the installation of 3 electro-terminals

Perú: First electric bus in Lima

- **2nd semester deployment 2019**
- Circulation along the main avenues of Lima (50 kms)
- 350km range
- An estimated 86,400 passengers per day
- The bus has the real-time data system and after six months a Replicability Report will be prepared to create a massive electric transport system in the country

New opportunities for electric bus charging infrastructure installation in
Uruguay, Argentina and Brazil

Fleet implementations in Latin America

Taxis fleets and corporate electric cars Colombia and Peru

Colombia:

- 37 electric taxis in Bogota with more than 34 charging points in 4 locations in the city
- 12 electric cars for Cabify and Avianca's corporate fleet

Peru:

- First 2 electric taxis in Lima with installation of charging infrastructure (Juicebox Pro 32 and Fast Charger)

Electric cars for Enel employees Colombia and Chile

Incentives to boost electric mobility in the Enel Group

- Plans for internal partners offer the possibility to access the purchase of an electric car through financing and fleet discounts
- We have more than 80 100% electric cars in Colombia and Chile
- About 5% of EV's in Colombia and Chile belong to Enel Employees

Innovation in bidirectional chargers

First V2G in Latin America

Sao Paulo, Brazil

V2G in Brazil (International Auto Show)

- Brazil's first two-way charging station, designed to supply power from a Grid to Grid system
- The V2G allows an optimization of energy consumption, "Peak Shaving", price arbitration and backup energy

Santiago, Chile

V2G in Chile (Energy Sustainability Agency)

- First charger of its type operating in Chile, which is complemented by the installation of a 3.0 kW solar photovoltaic system at the Energy Sustainability Agency and a Nissan LEAF electric vehicle
- This technology will seek to give electric vehicles additional functionality, particularly at the fleet level, which is to manage the energy to be consumed, or potentially the delivery to the grid, thus providing support to provide a service flexibility to the power grid

A new way to integrate electric mobility into cities

Real Estate Projects Chile, Brazil and Colombia

The Project:

- New offer to Real Estate Companies that includes the concept "Ready to Electric Mobility"

Objective:

- Incorporate the infrastructure necessary for the installation of electric chargers in the design phase of new buildings

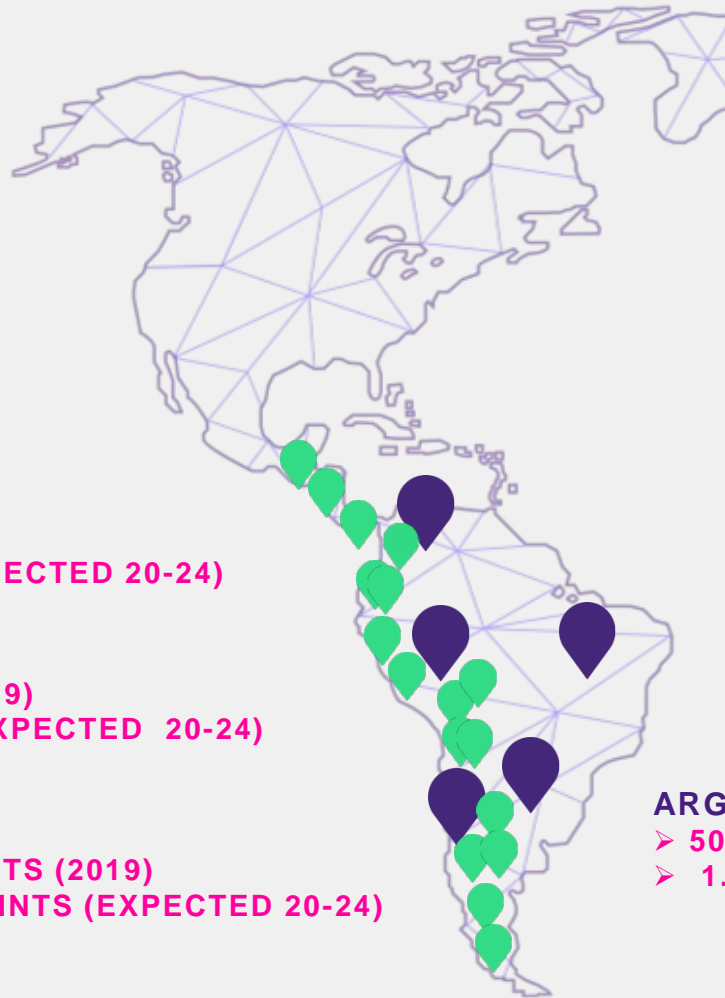

Smart city solutions Chile, Argentina, Peru, Colombia and Brazil

Offer of charging points integrated into urban mobility of cities

- **JuiceLamp:** efficient public lighting point combined with recharging infrastructure
- **JuiceLed:** efficient recharge point combined with advertising deployment via LED displays
